ABOUT

I have a B. Sc. in Engineering Physics from Federal University of Rio Grande do Sul, with graduation in October 2022. I'm fascinated about Physics, Quantum Computing and Data Science.

I've worked as a Data Scientist at Cadastra, a digital marketing agency where I helped to automate a verification algorithm to check affiliate sales legitimacy. The algorithm was able to detect fraudulent affiliation, and, with this, the company was able to recover fraudulent affiliation resources from sales.

At IBM, firstly I've worked with Watson AI checking the conversation flow of a chatbot from a Brazilian telecommunication company. Our team helped to increase customer service satisfaction.

Currently, I'm working with microservices and cloud for a Brazilian bank, IBM's client, helping to develop and maintain a financial portfolio that are used for over 16 million customers.

EDUCATION

FEDERAL UNIVERSITY OF RIO GRANDE DO SUL (UFRGS)

Bachelor of Science in Engineering Physics
October 2022

The Engineering Physics course aims to train professionals with solid conceptual and practical knowledge in Physics, Mathematics, computational methods and engineering skills; innovate in areas such as metrology, instrumentation, vacuum technology, physical characterization of materials, microfabrication, photonics and semiconductors. Engineering Physics is the application of Modern Physics in the Engineering of technological innovations. It is a connection between Science and the traditional branches of Engineering.

My harmonic mean is 8.8 out of 10.

Thesis – Grover's Search Algorithm: Comparative study of the performance of quantum hardware made available by IBM, Microsoft and Amazon.

WORK EXPERIENCE

IBM

Application Developer – Back End
July 2022 – Present

Technical Specialists in this Job Role have expertise in translating IT requirements in the design, development, and assembly of components to create custom information systems. Typical examples of the deliverables are functional and technical designs, models, components, code, unit tests, and documentation.

IBM

Early Associate
August 2021 – July 2022

- Data Engineer

  - Help with ETL jobs, checking and producing evidence of correct ETL job flow,
  - Work with SQL queries to check if the final data are being correctly generated,
  - Support data analysts, data scientists and data engineers.

- Q&A

  - Development and debug of e2e tests for AI chatbot to check conversation flow,
  - Backend development using Node.js,
  - Perform some tasks on Watson Studio,
  - Set up API in Postman.
  - Support developers.

CADASTRA

Data Scientist
November 2020 – August 2021

- Assist in data gathering and data analysis for result measurement,
- Generate insights of new marketing strategies and goals,
- Draft daily result reports,
- Help with data analysis and data visualization,
- Apply machine learning models to forecast sales,
- Cluster customers, helping CRM team personalize communication with them,
- Automated an algorithm that was able to verify the legitimacy of affiliate assignment sales,
- Cross selling strategy implemented to a travel company,
- Support new data scientists.
